

Humanistic Approaches to AI in the Language Classroom

SARAH WARFIELD

SENIOR LECTURER, NYU SHANGHAI

TALK PRESENTED ON THURSDAY, JUNE 25

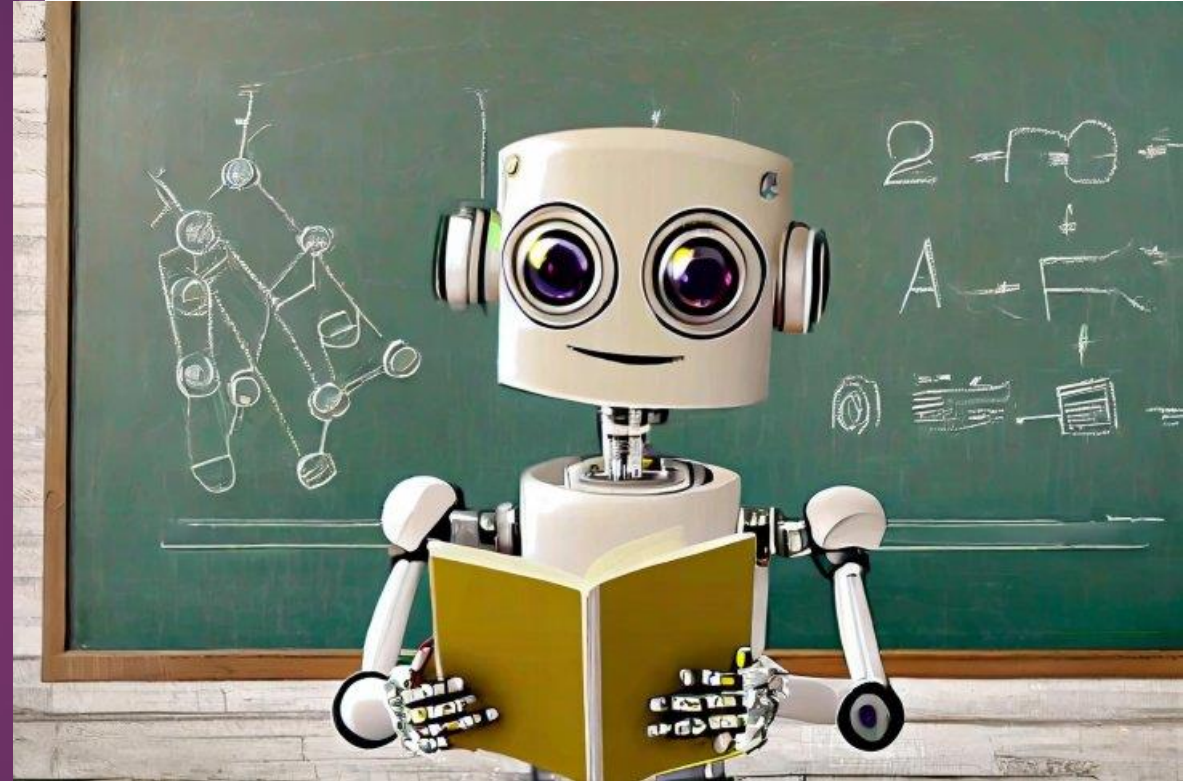

JINAN UNIVERSITY

GUANGZHOU, CHINA

Outline

- ▶ What can AI help students do?
- ▶ How should classrooms stay human-centered?
- ▶ How can we develop a meaningful two-space course design?

What can AI
help students
do?

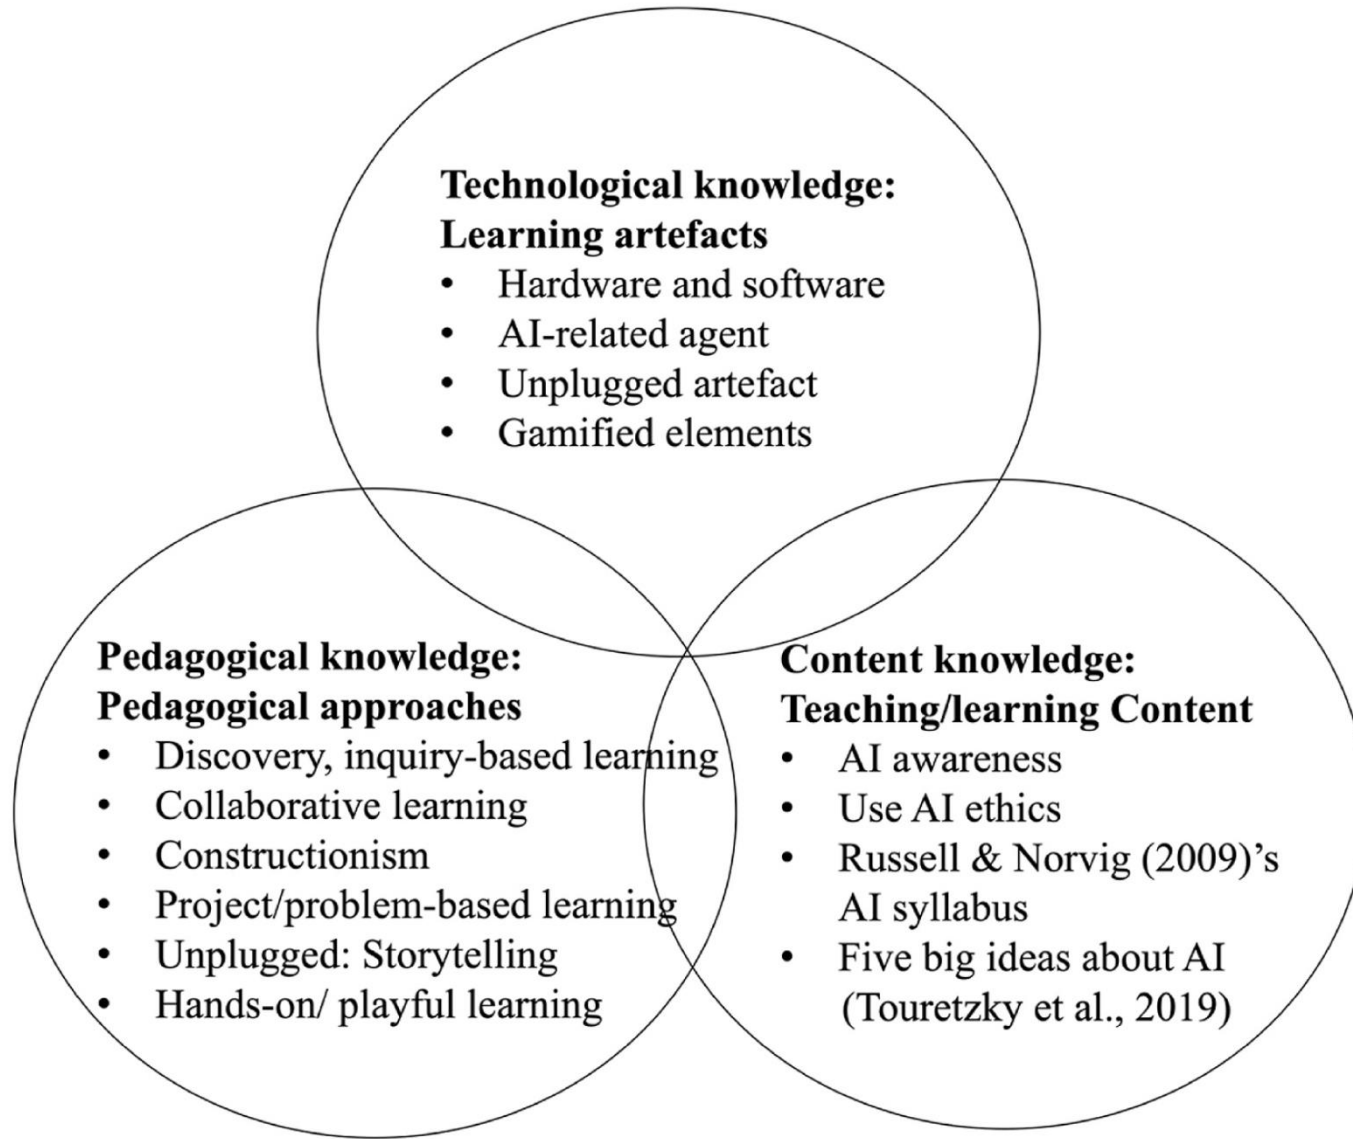

AI Literacy

What is AI Literacy?

What are AI Literacies?

AI Literacy TPACK Framework

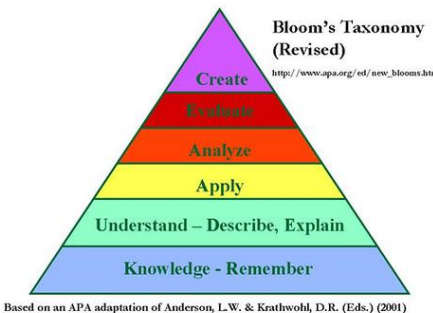

Fig. 3. AI literacy TPACK framework.

- Emphasizes instruction in content related to how AI works
- Brings to the fore AI ethics
- Allows for both domain-specific and unplugged tools

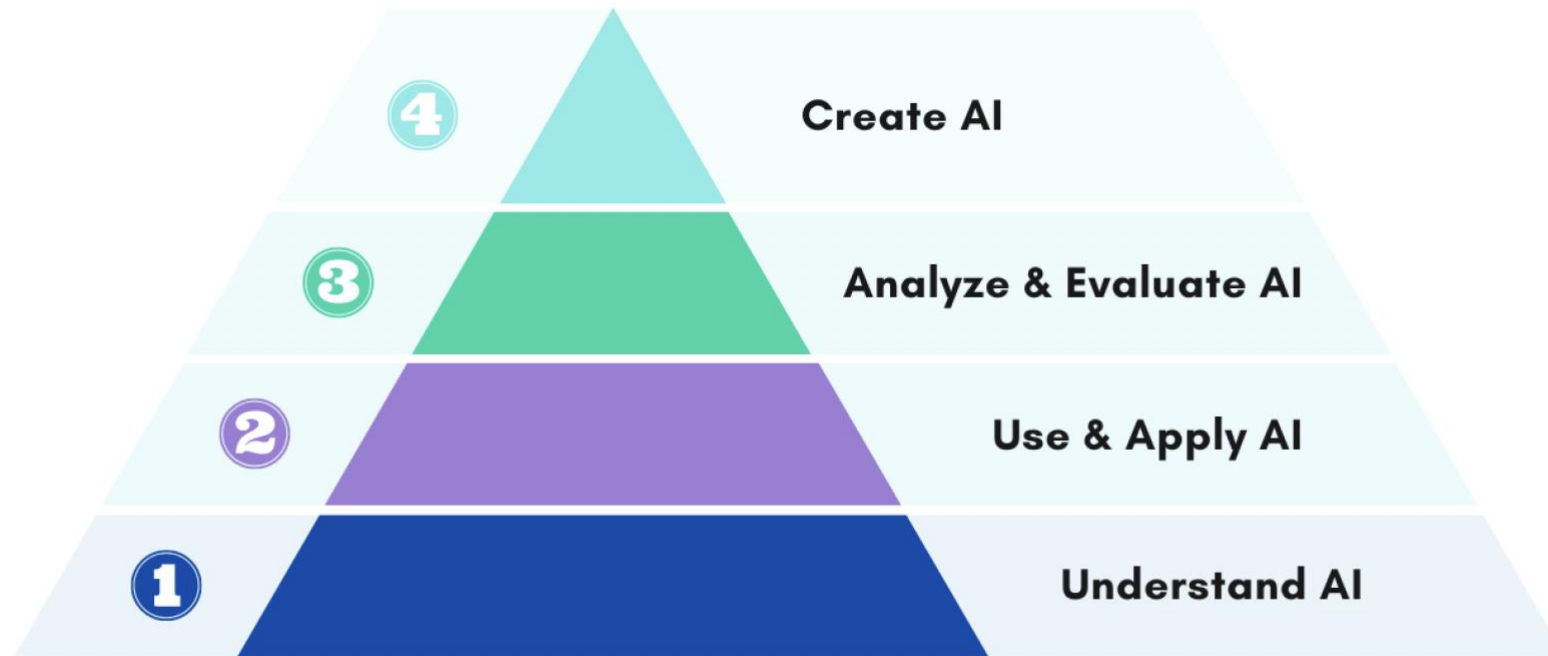

(Ng et al., 2021)

AI Literacy

- ▶ Set of competencies for integrating AI effectively and ethically across curricula (Long & Magerko, 2020).
- ▶ Almatrafi et al. (2023) identify six constructs: *Recognize, Know and Understand, Use and Apply, Evaluate, Create, and Navigate Ethically.*
- ▶ Need for more research of AI Literacy in Higher Education (Laupichler et al., 2022)

Pyramid Approach to AI Literacy

The Barnard College pyramid approach to AI literacy.

Melanie Hibbert, Barnard College

Level	Description	Extra notes
 No AI	The work is completed entirely without AI assistance. This level requires you to rely fully on your own knowledge, understanding and skills. AI must not be used at any point with the assessment work, but could be used to help you learn the subject beforehand.	Example assessment types: Hand-written work Closed-book examination or test Learner/Tutor discussion without notes Practical task
 Planner	AI may only be used in the planning for the work, such as brainstorming, suggesting appropriate headings, and generating ideas for improving your work. All AI use must be acknowledged and any generative AI conversations made available to the marker.	Example assessment types: Open-book examination or test Learner/tutor discussion with notes Writing-support software (such as Grammarly, Wordtune or MS Copilot) is not permitted at this level, and you may need to sign a declaration confirming that you have not used it.
 Spotter	AI can be used to help plan your work, and to help highlight potential mistakes in your work (e.g. as a spelling, punctuation and grammar checker). You can not use AI to suggest improvements to your writing style or create new content. All AI use must be acknowledged and any generative AI conversations made available to the marker.	Example assessment types: Report Case study Reflection Essay Writing-support software (such as Grammarly, Wordtune or MS Copilot) is permitted as a basic checker, but not an editor, and should be acknowledged with your AI reference.
 Editor	AI can be used to help plan your work, and to help improve what you have already written (e.g. correct your spelling, punctuation and grammar). No new content can be created using AI. All AI use must be acknowledged and any generative AI conversations made available to the marker.	Example assessment types: Report Case study Reflection Essay Writing-support software (such as Grammarly, Wordtune or MS Copilot) is permitted and should be acknowledged with your AI reference.
 Drafter	AI can be used to help plan, improve the clarity or quality of your writing, and assist you with drafting your work. All AI use must be acknowledged and any generative AI conversations made available to the marker.	Example assessment types: Case study Reflection Writing-support software (such as Grammarly, Wordtune or MS Copilot) is permitted and should be acknowledged with your AI reference.
 Collaborator	AI software can be used in any way you see fit to meet the requirements of the work, allowing for a collaborative approach with AI and enhancing creativity. All AI use should be acknowledged and generative AI conversations made available to the marker, unless explicitly told otherwise.	Any assessment that allows you to use AI freely will be assessing the quality of the end product against industry standards. You may choose not to use AI to help you if you wish, but you will not gain any additional credit for doing so.

Table 1. The Bridgend AI Usage Scale (adapted from Perkins, Furze, Roe and MacVaugh, 2024)

What am I allowed to use AI for?	 No AI	 Planner	 Spotter	 Editor	 Drafter	 Collaborator
Helping to understand a subject before assessment	✓	✓	✓	✓	✓	✓
Brainstorming & idea-generation	-	✓	✓	✓	✓	✓
Suggesting headings & structure of work	-	✓	✓	✓	✓	✓
Highlighting any spelling, grammar and punctuation errors	-	-	✓	✓	✓	✓
Rephrasing sentences that you've already written	-	-	-	✓	✓	✓
Adding new sentences to your work	-	-	-	-	✓	✓
Creating draft work for you to change and refine	-	-	-	-	✓	✓
Creating notes on a subject to support you in an assessment	-	-	-	-	✓	✓
Creating something that can be copied into your work	-	-	-	-	-	✓
Any element of your work	-	-	-	-	-	✓

Table 2. Summary of the Bridgend AI Usage Scale

Why bring a forklift to the gym?

Framing the Problem

Efficiency

Learning

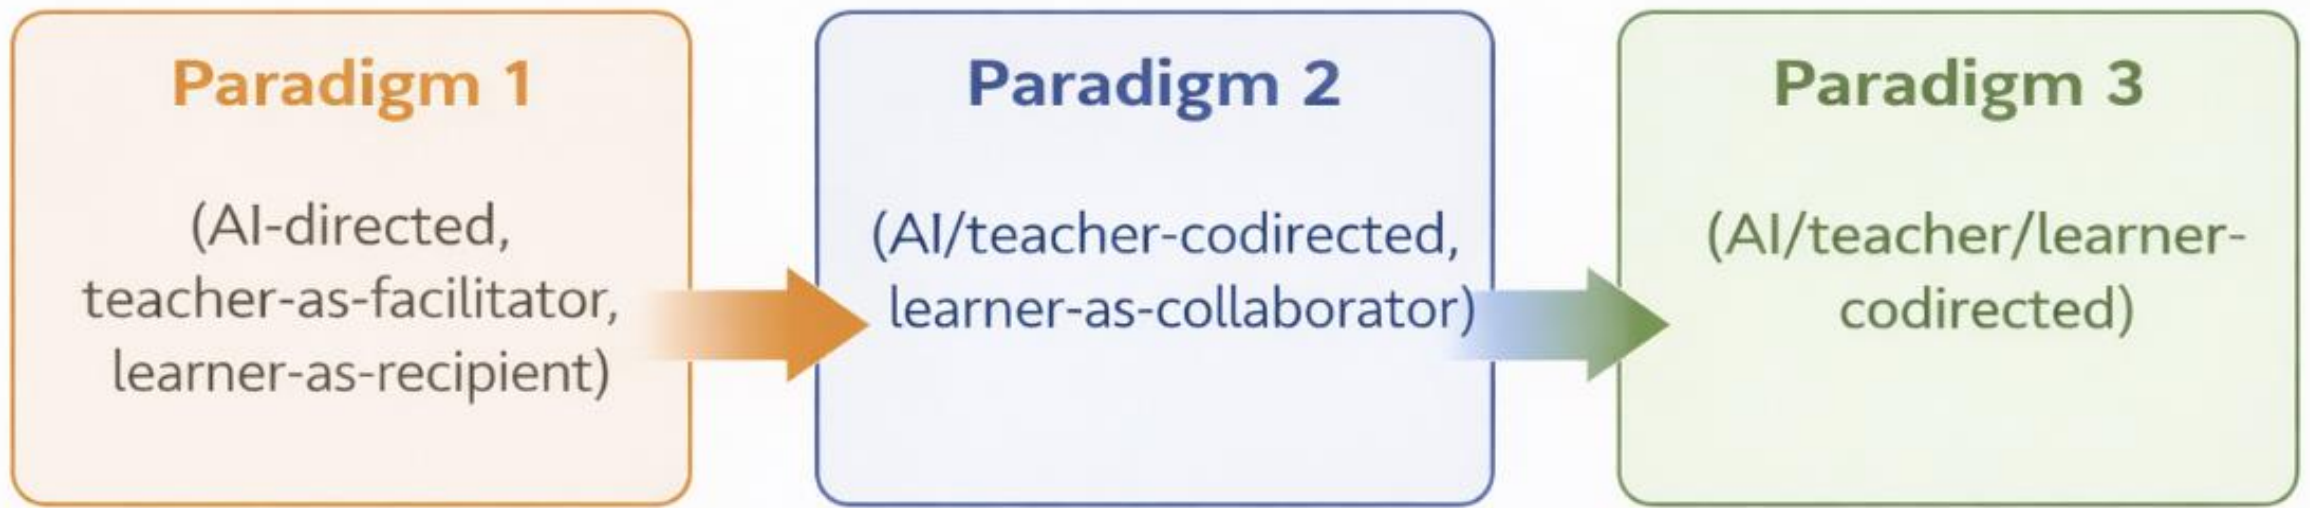

Much of the literature has focused on how AI makes learning more **efficient** for students, and more research is needed in how AI tools can be applied to **help students learn** (Crompton & Burke 2025).

Human-AI Interaction (HAI)

- ▶ Language learning as meaning making is shifting from solely human-to-human interactions to a broader understanding of human-to-computer interactions (Jiang & Hyland, 2026)
- ▶ AI-, teacher-, and learner-directed task structures support different forms of language learning and critical thinking (Wang et al., 2024)

Human-AI Interaction (HAI)

Students can alternate between paradigms depending on the task.

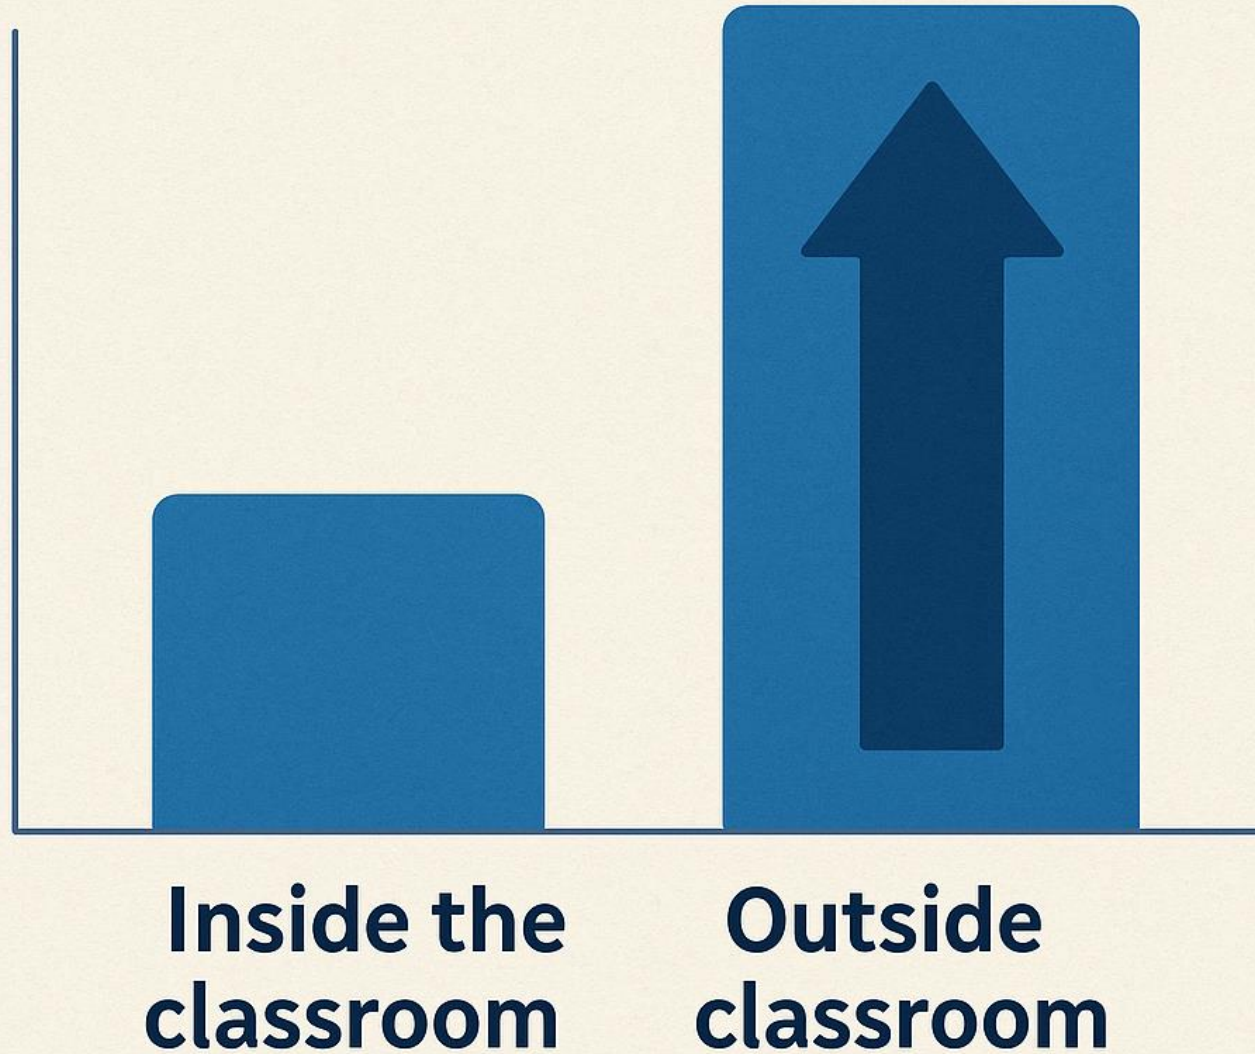

Paradigm 3 has the potential for the most advanced and critical stage of AI use for students.

(Wang et al., 2024)

Student Perceptions

- ▶ EAP students in Hong Kong found ChatGPT's immediate delivery of contextualized feedback improved their language proficiency (Kohnke, 2024).
- ▶ Students remain skeptical on the use of ChatGPT for listening and speaking skills (Liu et al., 2023).
- ▶ Implementation of GenAI Modules in EAP courses may improve critical thinking skills through the analysis of GenAI outputs (Ngo & Hastie, 2025).

Students' use of Gen-AI tools

EFL students consistently are using AI tools outside the classroom, while pedagogies for their use inside the classroom have yet to catch up. (Vogt & Flindt, 2023)

Need for more pre-service teacher training among language educators on how to use AI tools (Belda-Medina & Calvo-Ferrer, 2022)

Integrating AI Tools

- ▶ Scaffolded and well-planned tasks
- ▶ GenAI options instead of requirements
- ▶ Allowing space for students to analyze
- ▶ Meeting students where they're at

Use Case: AI tools and notetaking skills

An illustration on a yellow background. On the left, a blue and red mechanical arm, resembling a robotic gripper, is shown. It is holding a piece of a broken classical column. The column is grey and has a fluted design. The background is a solid bright yellow.

AI May Ruin the University as We Know It

Such is the ed-tech vision of higher education now. What the example of NotebookLM's promotional campaign demonstrates is the emergence of a new model or template for education, if not for learning itself: a productivity schema ready to be laid across the full spectrum of the postindustrial knowledge economy. It is not difficult to see that in the next phase one can eliminate the lectures and discussions and simply start with the summaries (and eventually the summaries of the summaries), streamed on demand.

The Roots of Western Thinking on Animals

The Western tradition of thinking about animals has two distinct sources: the Hebrew tradition and ancient Greece.

The Hebrew Tradition

- The dominion verse from Genesis states that humans have **dominion** over animals, which is God-given.
- This verse also implies that humans are **made in the image of God**, whereas other animals are not.
- This idea has been influential in the West, particularly in the interpretation of Thomas Aquinas.

Ancient Greece

- The Pythagorean tradition was vegetarian, possibly due to a belief in **reincarnation**.
- However, the most influential Greek tradition was that of **Aristotle**, who believed in a hierarchical or **teleological universe**.
- In this universe, one thing exists for the sake of another, and the less rational exists for the sake of the more rational.

Aristotle's View of Animals

Aristotle's view of animals is based on his concept of a hierarchical universe. He believed that:

Entity	Exists for the sake of
Plants	Animals
Animals	Humans

Hey, I'm Turbo

I can work with you on your doc and answer any questions!

Type a question here or type '@' to reference documents...

Chat

Edit

turbolearn ai

What to submit:

Use this text box to answer the four questions below. **Do not** use an AI tool to answer the questions. **Do not** use an AI tool to fix your grammar. Use this experience to practice writing and thinking through your ideas.

Instructions:

1. Watch the Unit 1 video without subtitles, just watch it to listen to it. If you don't feel now that it's hard, then when it gets easier, you won't have anything to compare it to! (one hour)
2. Watch the video and pay more attention to adding to your notes. (one hour)
3. Watch it one more time and add to your notes. (one hour)
4. Load the video into [turbolearn](#). Compare your notes to turbolearn's notes. (30 minutes)

Answer the following questions: (30 minutes)

1. How did your experience of note-taking change between watching the video on your own and using TurboLearn?
2. What differences did you notice between your notes and the notes generated by TurboLearn?
3. Did using TurboLearn help you capture information you might have missed? If so, how?
4. Which method (your notes or TurboLearn's) did you find more effective for understanding the content, and why?

Notice that I have given you timings for this assignment. This is a good estimate of how long this should take you to complete this assignment. If it takes longer than this, please stop and send me an email. The information from the Unit 1 Lecture will be on the midterm exam. It's a good idea to start familiarizing yourself with it now. Similar to the jigsaw activity, this is not a memorization task. I expect you to watch the video enough to come to class to fill in the gaps in your knowledge together. Looking forward to it!

Time for
reflection

Notetaking with AI

- ▶ Students struggled with handwritten notes, often finding them incomplete or disorganized despite the effort required to take them.
- ▶ TurboLearn provided structured, detailed notes, but some students found these overwhelming or misaligned with their personal understanding.
- ▶ I observed varied preferences.
 - ▶ Some students favored the cognitive benefits of handwriting, while others appreciated the efficiency and comprehensiveness of TurboLearn.

Use Case

Finding Keywords with ChatGPT

Why use ChatGPT?

Using ChatGPT to find keywords can be especially helpful for non-native English speakers, students researching outside their usual subject area, or those working on their first academic project. GPT can quickly suggest relevant terms and concepts, improving the accuracy and breadth of your research. It can also help clarify terminology and refine your search strategy, ensuring you focus on the right topics, even when you're unfamiliar with the specific language or field of study.

Finding Keywords using a GPT

Instructions: Go through this document step-by-step, using the GPT of your choice.

Remember if you use ChatGPT it may be easier due to the voice function.

Resist the urge to let the GenAI do all of your critical thinking for you.

- Every time you see a  that means you are trying out a strategy from the online lecture
- Every time you see a  that means you will have to insert a screenshot or screenshots
- Everytime you see a  that means you will have to write down an answer (using your mind and not the robot)

Step 1: Initial Search

Step 1: Initial Search

Type your prompt into a GPT.

Example prompt: *I'm doing a research project on the social and economic experiences of expats in Shanghai. I've read about lifestyle, employment, and cultural adaptation. Give me some relevant keywords for this.*

Use the space below to paste a screenshot of your initial results. The image should include your prompt as well—so maybe you need two screenshots 😊

💭 **What do you think?** 💭

The results are _____. (fill in the blank with one or two words)

Step 2: Analyzing your results

Typically, the GPT will give you more results than you know what to do with. The strategies below will put you in charge of the process. You can try as many strategies as you see fit.

Now you can use your critical thinking skills to move beyond the transactional tendency of using GenAI. Muse a bit. Make the GPT work for you. Think about the results in a way that deepen your understanding of the research topic. You have choices on how best to do this.

Strategy 1: Narrow your results

Tell the GPT: I just want to focus on three words/phrases at a time.

Repeat until you find the handful of words/phrases you want to use for your search.

Use the space below to paste a screenshot of your final, narrowed results.

What do you think?

Why did you choose these final results? Use the space below to tell me in 2-3 sentences.

Keywords with AI

- ▶ Builds intentional control over AI output
- ▶ Strengthens critical thinking about relevance and meaning
- ▶ Develops transferable research and keyword-search skills

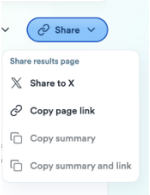

Find the best science, faster.

Use Case

1. Watch this [video](#) I made walking you through using [Consensus.app](#).
2. Follow the directions in the left-hand column of the table below. Use the right-hand column to write your answers to the prompts in the right-hand column.

Directions + Prompts	Your Response
Paste your research question into the Consensus search bar. Then, notice the summary at the top. <i>Will you use the summary Consensus produces to generate questions to help you find main topics? Or will you just search using your research question? If you have used Consensus to generate main topics, what are they?</i>	
Continue searching and finding academic sources using Consensus. <i>There is a share link on the Consensus site. Use the right-hand column to paste all of your searches.</i> 	

1. Watch this [video](#) I made walking you through using [Perplexity AI](#).
2. Follow the directions in the left-hand column of the table below. Use the right-hand column to write your answers to the prompts in the right-hand column.

Directions + Prompts	Your Response
Paste your research question into the Consensus search bar. Then, notice the summary of reasons below the search bar.. <i>Will you use the summary Perplexity produces to generate questions to help you find main topics? Or will you just search using your research question? If you have used Perplexity to generate main topics, what are they? Did you find that Consensus and Perplexity generated the same topics, or that one was better than the other?</i>	
Continue searching and finding non-academic sources using Perplexity. <i>There is a share link on the Perplexity site. Use the right-hand column to</i>

AI research Tools

1. For the midterm, I asked you to use Google Scholar to conduct your research. How is this experience different? What did you gain? What did you lose?
2. Some professors are wary of AI because they think it is cheating. Do you think what we've done today is cheating? Why or why not? Choose a stance and tell me your position.
3. How did using these AI-powered tools change your ability to find information on your topic? What surprised you about the amount or type of information available through these tools?

Time for
reflection

Question 1

- ▶ AI tools were perceived as faster
- ▶ Google Scholar was perceived as requiring more effort
 - ▶ Valued more by students for the level of engagement
- ▶ Perhaps saw Google Scholar as a skills-building tool

Question 2

- ▶ Generally viewed AI tools as an evolution in research
- ▶ Emphasized using AI for efficiency while still making independent decisions about sources and organization.
- ▶ Proper citation and transparency of AI use is necessary
- ▶ AI as a tool for reference and inspiration, not as a means to replace intellectual contributions.
- ▶ Some noted that the process remains human-driven, with AI aiding in filtering and summarizing, not replacing deeper engagement.

Question 3

- ▶ Students like getting quick access to (what they perceived to be) relevant, high-quality academic sources
- ▶ Summaries and abstracts helped students decide quickly which sources to use
- ▶ AI tools offered broader perspectives, related questions, and multimedia elements like videos
- ▶ Consensus was praised for filtering and accessibility, while Perplexity was seen as less reliable for academic research
- ▶ Students are motivated to use GenAI to find more relevant academic sources

Use Case

Your new Tutor, ChatGPT!

Instructions:

This is a Gen-AI-assisted assignment designed to help you practice and improve your presentation skills. For best results, you can use ChatGPT on your phone, which includes a voice prompt, or Poe, which also has a voice input feature. If you know another Gen-AI tool with a voice prompt, you can use that and share it with me.

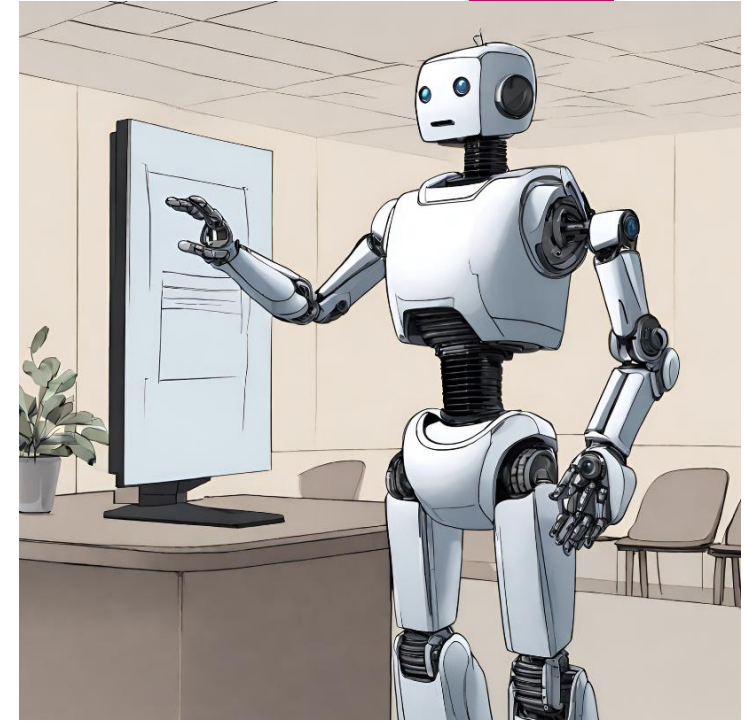

In this assignment, you will practice presenting out loud by breaking your presentation into sections and speaking each part into the Gen-AI tool. I have prepared prompts for you to use that will guide the AI to give you specific feedback on different aspects of your presentation.

In the first part of this assignment, you will focus on your introduction, which includes your hook, outline slide, and research question; your first and second talking points; and your conclusion. It is very important that you use the provided prompts because the goal is not for the AI to write a script for you, but for it to give constructive feedback on your delivery and organization. You will also use the AI to analyze different points from the rubric to ensure your presentation meets the required criteria. This step-by-step approach will help you refine and improve your work.

In the second part of this assignment, you will focus on the other elements required in the rubric. Below I have written the prompts that you will use for both parts of this assignment.

This is a speaking assignment. Be sure to use the voice function. If you cannot access ChatGPT or Poe using an audio prompt, you can go to IT and check out a laptop or iPad and install the app. Ask IT to assist you with this.

Voice prompts for multimodal applications

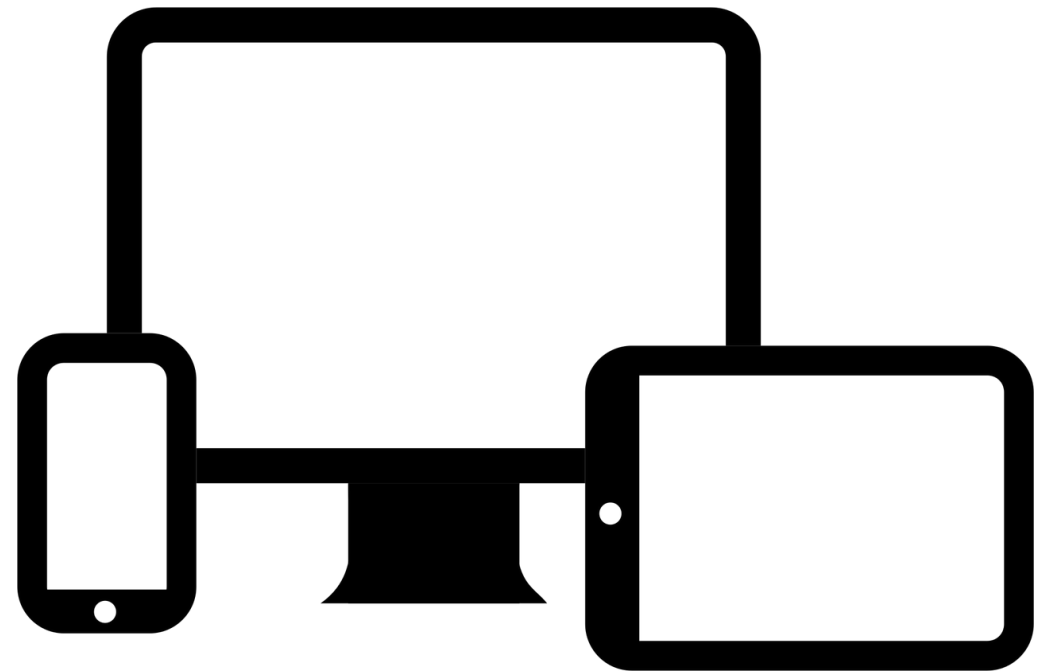

Prompt 1	Prompt 2	Prompt 3	Prompt 4
I'm practicing the introduction for my presentation, which includes the hook, outline, and research question. Please answer the following questions: 1.How effective is my hook at grabbing attention? Suggest specific ways I can make it stronger (e.g., use a surprising fact or a thought-provoking question). 2.Does my outline clearly explain the structure of the presentation? If not, what should I add or clarify? 3.Does the introduction lay out the problem well and establish a framework for the rest of the presentation? Provide precise suggestions to improve this aspect. 4.Is my research question relevant to the topic and clearly connected to the framework? If not, how can I refine it? Do not provide sample sentences. You may provide a sample phrase (e.g., 'a surprising statistic about X') if it helps clarify your feedback. Resist the urge to rewrite or provide a script. I am not allowed to use a script for this assignment. Instead, give me actionable feedback for each question to help me improve my presentation.	I'm practicing the first two talking points for my presentation. Please answer the following questions: 1. Is my explanation of Talking Point 1 clear and well-organized? Suggest specific ways I can make it clearer or more engaging. 2.Does Talking Point 1 connect well to my overall topic and the other points in the presentation? If not, how can I improve the connection? 3.Is my explanation of Talking Point 2 clear and well-organized? Suggest specific ways I can make it clearer or more engaging. 4.Does Talking Point 2 connect well to my overall topic and the other points in the presentation? If not, how can I improve the connection? Do not provide sample sentences. You may provide a sample phrase (e.g., 'an example from X study') if it helps clarify your feedback. Resist the urge to rewrite or provide a script. I am not allowed to use a script for this assignment. Instead, give me actionable feedback for each question to help me improve my presentation.	I'm practicing the conclusion for my presentation. I've already read you my introduction and talking points, and now I'm going to read you my conclusion. Since the conclusion refers back to the earlier parts of my presentation, please use the information I've already shared to inform your feedback. Please answer the following questions: 1. Does my conclusion effectively summarize the key points of my presentation? Suggest specific ways I can make the summary clearer or more impactful. 2. Does my conclusion provide a strong and memorable closing statement? If not, what could I include to make it stronger? 3. Does my conclusion clearly tie back to the introduction and overall framework of the presentation? If not, how can I improve this connection? Do not provide sample sentences. You may provide a sample phrase (e.g., 'a call to action about X') if it helps clarify your feedback. Resist the urge to rewrite or provide a script. I am not allowed to use a script for this assignment. Instead, give me actionable feedback for each question to help me improve my presentation.	I'm practicing my entire presentation now. I will read the presentation all the way through from beginning to end, and I'd like you to give me feedback on specific things. 1. Did I clearly define any academic terms that I used? Academic terms can be any terms in this presentation that need a definition. 2. Is it clear that I'm using evidence-based arguments and that I'm citing my sources orally, or does it seem like I'm missing citations? 3.Is it clear where ideas are coming from? Can you tell which ideas are mine and which belong to someone else? 4. Did I repeat my research question often enough for the audience to understand its importance and how it ties into the presentation? 5. Did I miss anything important, and are there other issues you noticed that I should address? Resist the urge to write a script or to suggest things for me to say. Simply analyze what I have said and focus on giving me actionable feedback for each of these points to help me refine my presentation.

AI-/teacher-
/learner-directed

How should
classrooms stay
human-
centered?

I now invite you to
close your laptops and
turn over your phones.
Let's begin.

Humans in the loop

The individual is again assumed powerless in altering the existing power relations between themselves and the data owners as questioning power relations, discourses, and identities are completely left out.

(Velandar et al., 2024, p. 155)

GenAI in the ELT Classroom

Statements 1 to 4:
AI can help learners improve their English speaking/writing/listening/reading skills.⁴

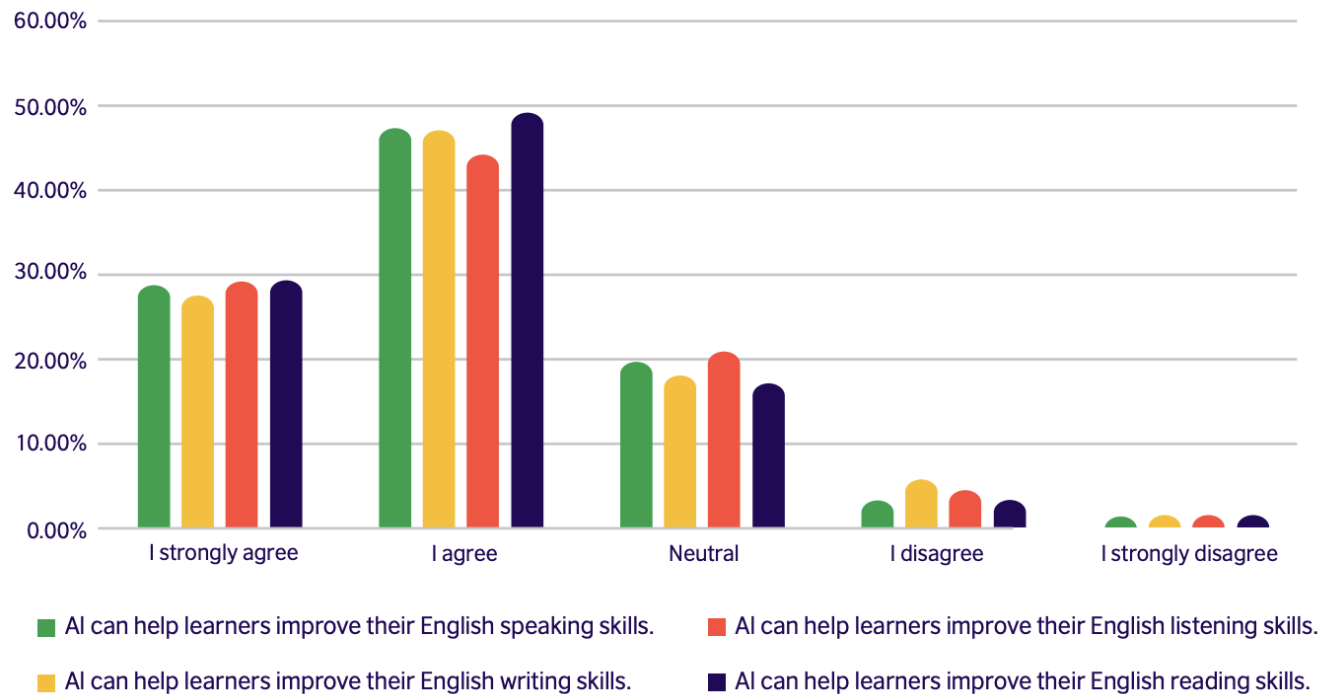

Figure 3 Responses from 1,112 teachers to survey statements 1 to 4

(Edmett et al., 2024)

Intentional AI Use

- ▶ Encourage students to *not* use GenAI for brainstorming

Intentional AI Use

- ▶ Many AI statements now encourage students to use AI as a brainstorm or first draft tool
- ▶ What is lost if we no longer encourage brainstorming and/or group idea formation?

Examples of Conditional Use

In some cases, instructors might want to help students explore GenAI in the context of their course and are, therefore, open to student use of AI in specified instances. CELT refers to these types of policies as “conditional AI use.” The exact policies outlining conditional use of AI vary widely based on learning goals and uses. For instance, instructors may choose to allow student use of AI:

- for specified assignments only;
- for specific stages or tasks in preparation for all assignments (i.e. brainstorming, proofreading, etc. but not drafting); or
- for in-class activities only (not for completing individual or group assignments).

Instructors may also specify which GenAI tools students may or may not use. In most cases for assignment use, instructors should provide students with guidance about how to cite and acknowledge their use of AI. For instructors interested in considering possible ways to incorporate AI into their teaching, [contact CELT for a consultation](#).

Center for the Enhancement
of Learning and Teaching

AI Writing Workflows

- Most students use AI in only 2–3 stages of the writing process rather than throughout.
- Three recurring workflows emerged:
 - Learning-oriented: AI for ideation, sourcing, and planning.
 - Quality-oriented: AI for drafting and revision.
 - Productivity-oriented: AI throughout to reduce friction and maintain momentum.
- AI use reflects different priorities (learning, quality, or productivity), not simply more or less AI use.

(Bodei et al., 2026)

CHOOSING A RESEARCH TOPIC

Essay 3

You'll write a better paper if you start with a topic that genuinely interests you. Even if you feel like you don't have any ideas, you probably do. you just need a way to find them.

Use the steps below to help you choose a topic that both engages you and fits the assignment.

1. Start with Frustrations or Curiosities

Make a list of things that bother, confuse, or fascinate you about modern life. Think about how society, culture, or technology is changing—and how those changes affect people's lives.

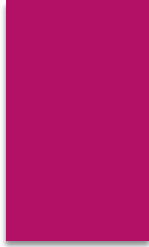

2. Add Personal Interests

List things you care about:

- What do you read, watch, or talk about in your free time?
- What social or cultural issues matter to you?
- Where do you see change happening around you?

3. Find Overlap

Compare your lists. Do you see a connection between something that frustrates you and something you're interested in? That intersection could become a strong research topic.

4. Check for Fit

Ask yourself:

- Does this topic involve cultural, societal, or technological change?
- Can I see how it relates to identity or interaction?
- Would I enjoy exploring it in more depth?

Once you've found a topic that matters to you and connects to the big themes of the assignment, you're ready to start exploring what's already been said about it—and what new perspective you might bring.

Intentional AI Use

- ▶ Find opportunities to help students engage in class, to stretch their critical thinking skills
- ▶ Avoid the trap of off-loading everything to AI
- ▶ Attempt to motivate students with forward-looking goals

Using a Synthesis Worksheet

Using a Synthesis Worksheet

Creating posters in class

Useful as a jigsaw task

Friedrich Engels:
Socialism: Utopian and Scientific

Capitalism is a stage of development
Prof. Richard D. Wolff

Rulers of the World

Connections:
P2 & R1:
capitalism will be challenged due to its built-in flaws.
P1 & R1:
capitalism's flaws:
freedom of competition changes into the opposite: into monopoly.

Marxism is made up of three parts:
① Utopian Socialism
② Dialectics
③ Historical Materialism

Capitalism is facing big challenges for its internal Problems!

There Are Plans In Capitalism Spoken By Marx

Conflicts
a. M.C. & M.C. They are the reality of the world. Dialectics is a way of thinking about the world. It is a way of thinking about the world. It is a way of thinking about the world.

Things he explains:
① Utopian Socialism
② Dialectics
③ Historical Materialism

1. environment crisis
2. instable economy
3. systemic racialism

Why Marxism is on the rise again

Prof Richard D. Wolff On the Four Reasons Capitalism is Imploding ①

Capitalism has unsolved inner problems.

pollution & environmental problem
inequality
instability. crises every 10 years
racism

Friedrich Engels: Socialism: ②
UTOPIAN & SCIENTIFIC

Socialism is a dialectical analysis that emerge from capitalism.

Socialism: not ideology prescriptions
- American & French Revolution
- Saint Simon Robert Owen
- Hegel & Lockean Metaphysics
- True democracy Materialism

Why Marxism is on the rise again ③

Future depends on us to be better

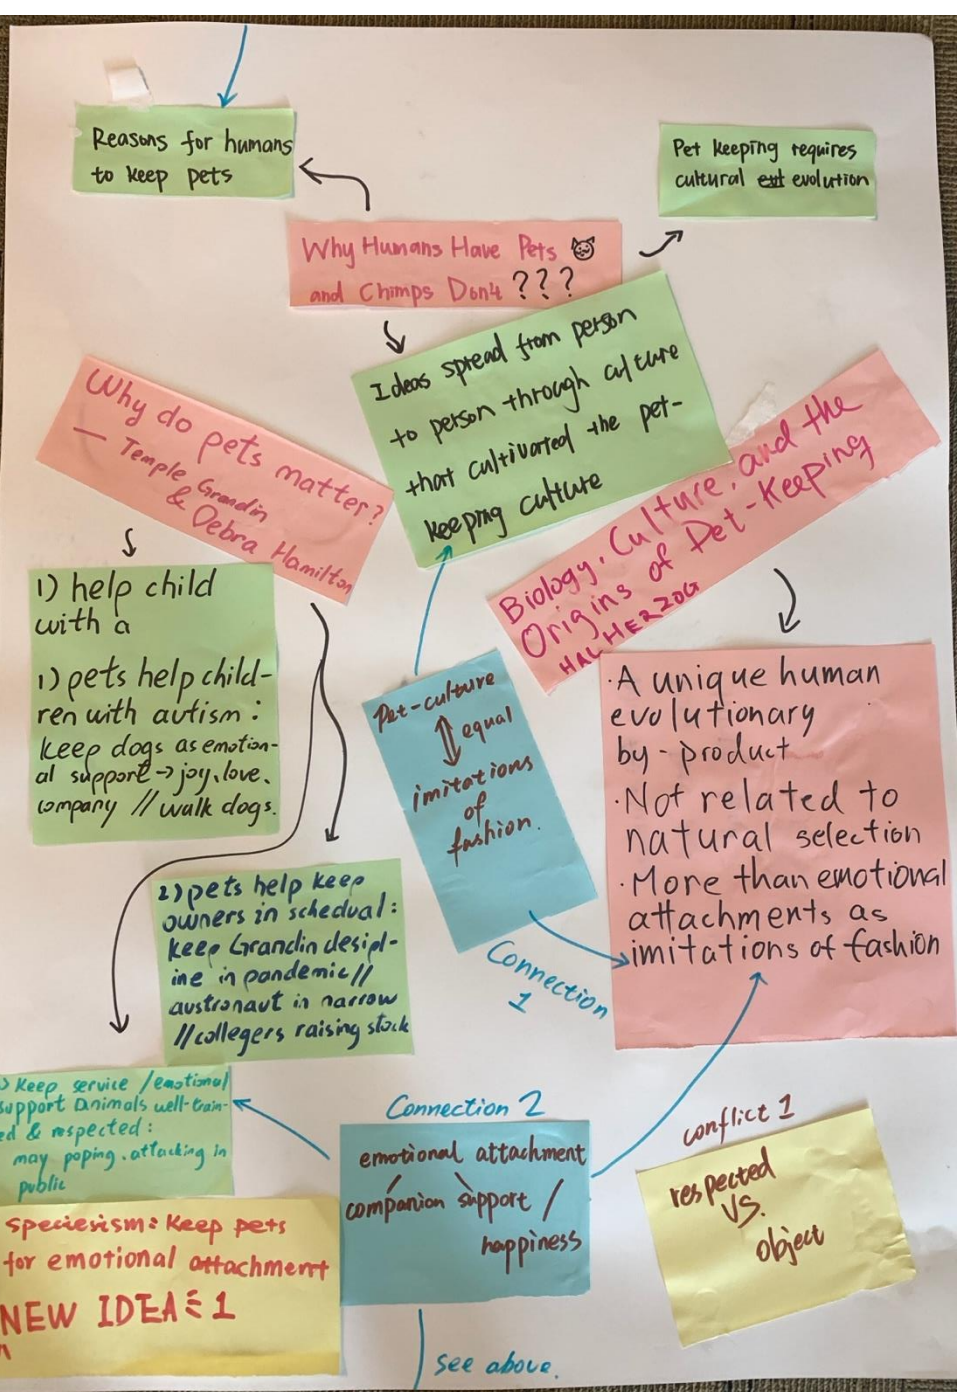

problems rises as post-capitalism => rise of proletarian to build the future

connections

① + ③ both argue that capitalism should adapt some changes.

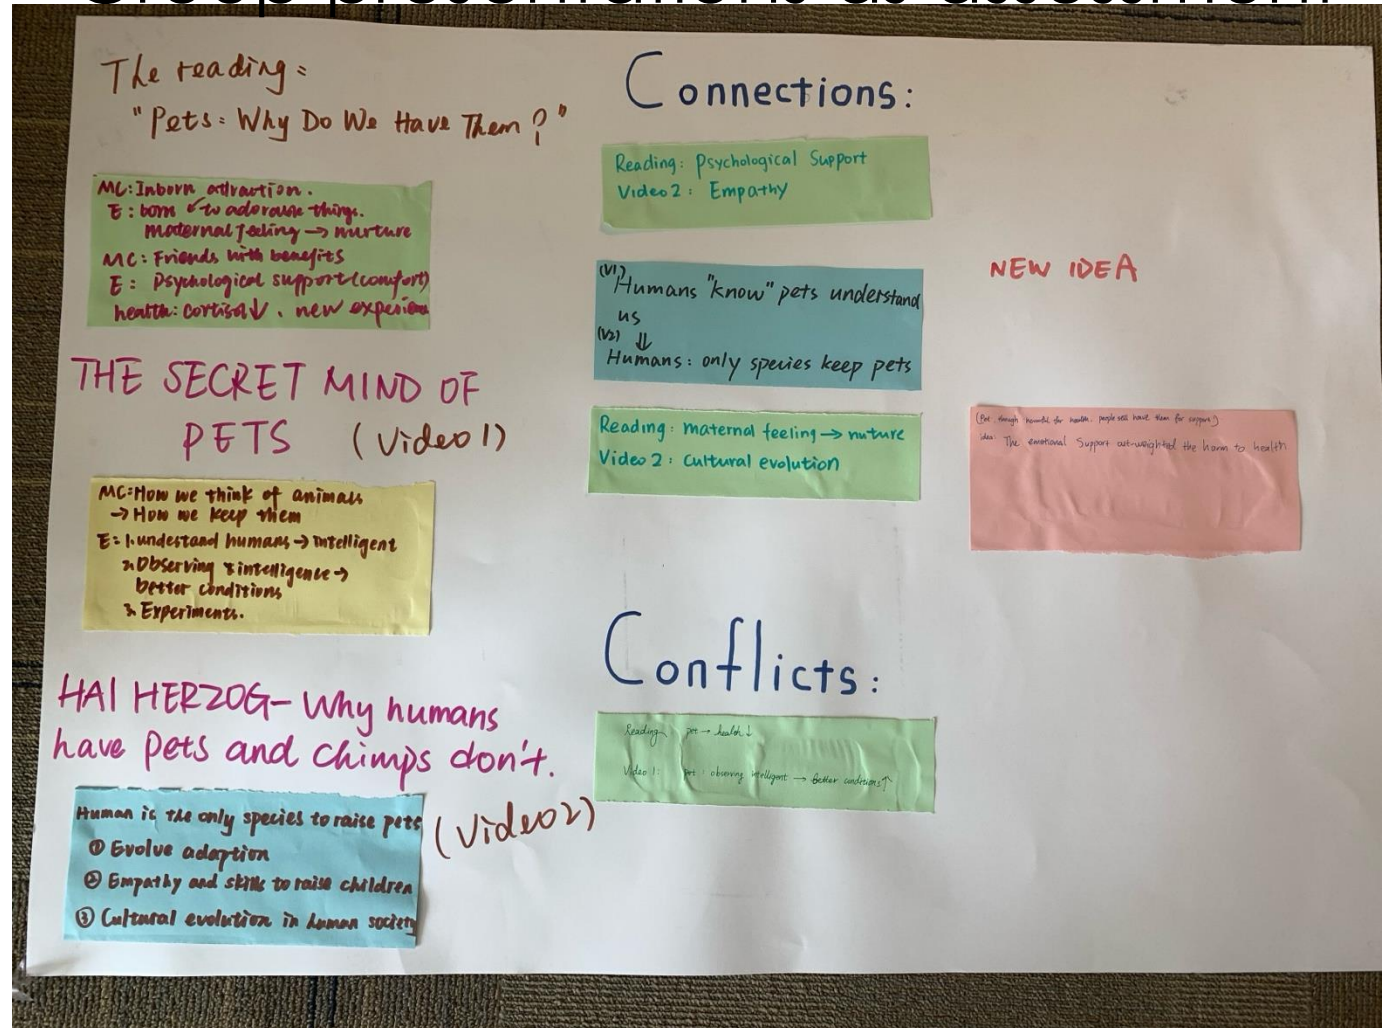

conflicts

①-② Consider the topic of Contribution of Capitalism differently.
① only problems ② contributions & problems

Students can rotate posters or stay with the same poster

Group presentations as assessment

1. What is the main claim and evidence used in the sources?

Enter information for each video

TedEd Video

Main Claim: Animals feel pain, but in different ways

Evidence: Crayfish can have an anxiety disorder
Elephants can recognize themselves and people.
Dolphins have the ability to imitate.
shrimp, octopus

Utilitarianism

Main Claim: intro to the ideology of utilitarianism and several kinds of it. they all seek for the benefit maximization.

Evidence: act, rule

Who will feed China's growing middle class?

Main Claim: The growing consumer demand of China's middle class is a big challenge to the whole world.

Evidence: Farmers can no longer produce enough food to satisfy China's growing demand
China has to import foods from all over the world.
China consumes 50 percent of the world's pork. And the process of the waste of livestock cause pollution.

2. How do the sources connect and/or conflict with one another?

Connections

1. The fact that animals can feel pain from the TedEd video can be a support for the idea of animal protection.
2. The PBS's report illustrates the unfavorable living condition of food-production animals like pigs and hens, and the TEDx explains the grief created by humans on animals. The two videos collectively show there is still a long way to go to protect animals and improve their welfare.

Conflicts

1. The idea in the video related to China's growing meat consumption demand contradicts the one in the TedEd video that in a way that it ignores the capacity of animals to feel and just regard them as products to satisfy the demand. However, although it seems like it reaches the greatest good for the people, it contradicts utilitarianism because it causes a bigger problem of environmental pollution.
2. While there seems to be some progress in the field of animal protection, the main idea of utilitarianism persuades humans to chase the greatest good, and most of the time, humans seek for the best at the expense of animal welfare.

How can I combine the ideas of both to say something that is completely new?

Idea One

Humans not only feel greif, they create grief as well.

Idea Two

Act utilitarianism chooses actions that creates the greatest good.

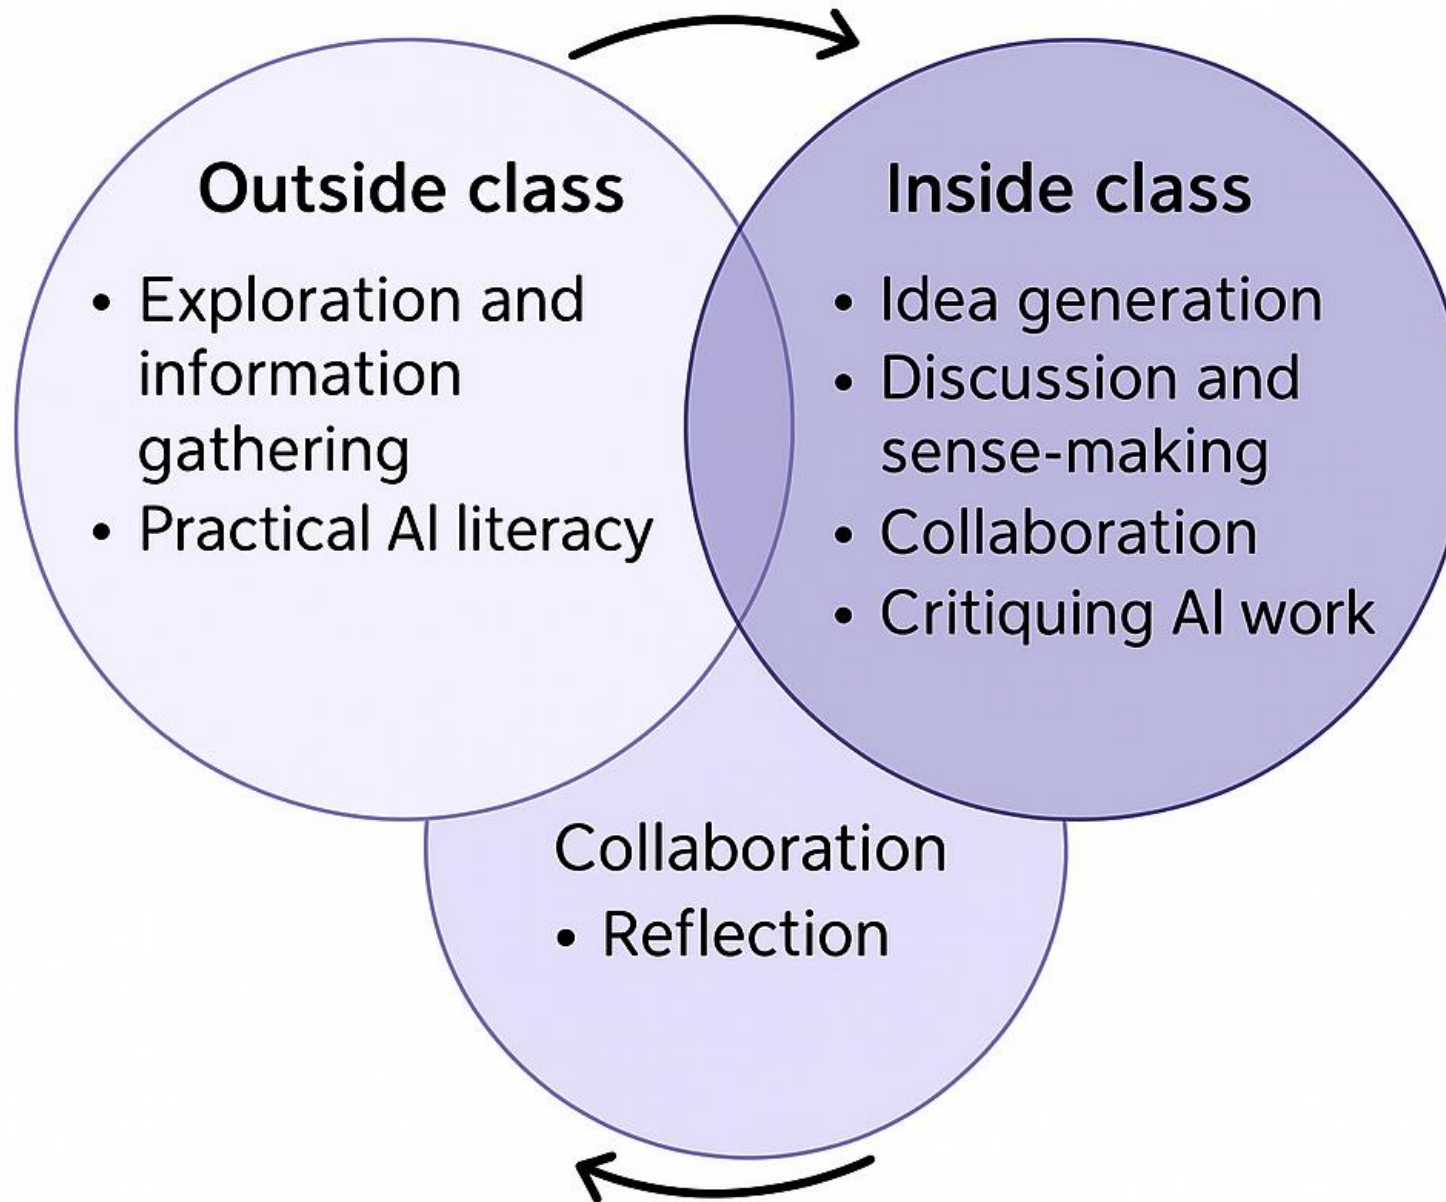

Something New

The way to reach greatest good should be beneficial to all species rather than using grief from non-human animals to meet humans' demand.

How can we
develop a
meaningful two-
space course
design?

Two-Space Course Design

If it matters,
do it
in class.

Future Directions

- ▶ AI literacy among L2 instructors needs to be improved and clearly defined, all within a rapidly-changing landscape (Edmett et al., 2024)
- ▶ The need for pedagogic intervention in GenAI integrations (Ngo & Hastie, 2025)
- ▶ AI Literacy across the curriculum as a 21st century skill to prepare students for the workforce (Southworth et al., 2023)
- ▶ Future AI literacy frameworks should emphasize critical judgment about when to retain, share, or delegate cognitive work to AI.
