

**Prompt:** Give me a 30-minute lesson plan to review last night's unit reading on how pollution affects wildlife. Students are Form 1, A2-B1 level, CMI school in Hong Kong. The next lesson will ask students to write a short paragraph about one type of pollution.

**Lesson:**

30 minutes is enough for a focused reading review that also prepares students for the paragraph-writing lesson.

**Lesson Objective**

Students review key ideas from the reading and identify different types of pollution and their effects on wildlife.

**1. Warm-up Recall (5 min)**

Write on the board:

- What animals were mentioned in the reading?
- What kinds of pollution did we read about?
- How can pollution harm animals?

Students discuss in pairs for 1 minute, then share answers.

Board a simple mind map:

Pollution → Wildlife

**2. Reading Review Quiz (8 min)**

Give students 5–6 quick questions.

Example:

1. Which pollution affects sea animals most directly?
2. How can plastic hurt turtles?
3. What is air pollution?
4. True or False: Pollution only affects animals in cities.
5. Name one animal affected by pollution.

Students answer individually, then check in pairs.

Review answers as a class.

### 3. Matching Activity (7 min)

Students match pollution types with effects.

| Pollution Type    | Effect on Wildlife                |
|-------------------|-----------------------------------|
| Plastic pollution | Animals eat plastic               |
| Water pollution   | Fish become sick or die           |
| Air pollution     | Animals have breathing problems   |
| Noise pollution   | Animals cannot communicate easily |

Check answers together.

Extension: Ask students which effect is the most serious and why.

### 4. Speaking Preparation for Writing (7 min)

Put students in pairs.

Each pair chooses one pollution type and completes:

- Type of pollution: \_\_\_\_\_
- Animals affected: \_\_\_\_\_
- What happens to them: \_\_\_\_\_
- One solution: \_\_\_\_\_

Students practise saying their answers in complete sentences.

Example:

“Plastic pollution affects sea turtles. They may eat plastic bags and become sick. People should use less plastic.”

### 5. Exit Ticket (3 min)

Students write:

1. One type of pollution.
2. One animal affected.
3. One effect on the animal.

Collect these as a quick assessment and use them to bridge into the next lesson’s paragraph writing.
